

Whether you thermal spray, paint, or powder coat -- the OD Surface Prep System cleans and provides the proper surface finish for your specific application!

In a thermal spray application, the adhesion of the metal spray is only as good as the grit blasting done just prior.

Our systems grit blast parts that cannot afford quality problems such as inside automobile engines and transmissions, down hole oil pumps, and inside both commercial and military aircraft.

A quality blast is guaranteed with controlled part manipulation, media and air flow, accurate blast gun movement, media sizing, and many other components that ensure a quality blast.

Fewer quality problems means better parts, more satisfied customers and a more profitable bottom line. Give us a call today to see how we can help improve your manufacturing operation.

Outside Diameter Surface Prep System

Manually processing parts in a 24/7 operation is labor intensive and does not always provide a consistent blast. By adding automation to your system, you can improve your part quality and decrease your overall operating costs.....
